

NİL ÇELİK KAPI - PİVOT DOORS

NESİLLER BOYU MİRAS BIRAKACAĞINIZ KAPILAR ÜRETİYORUZ

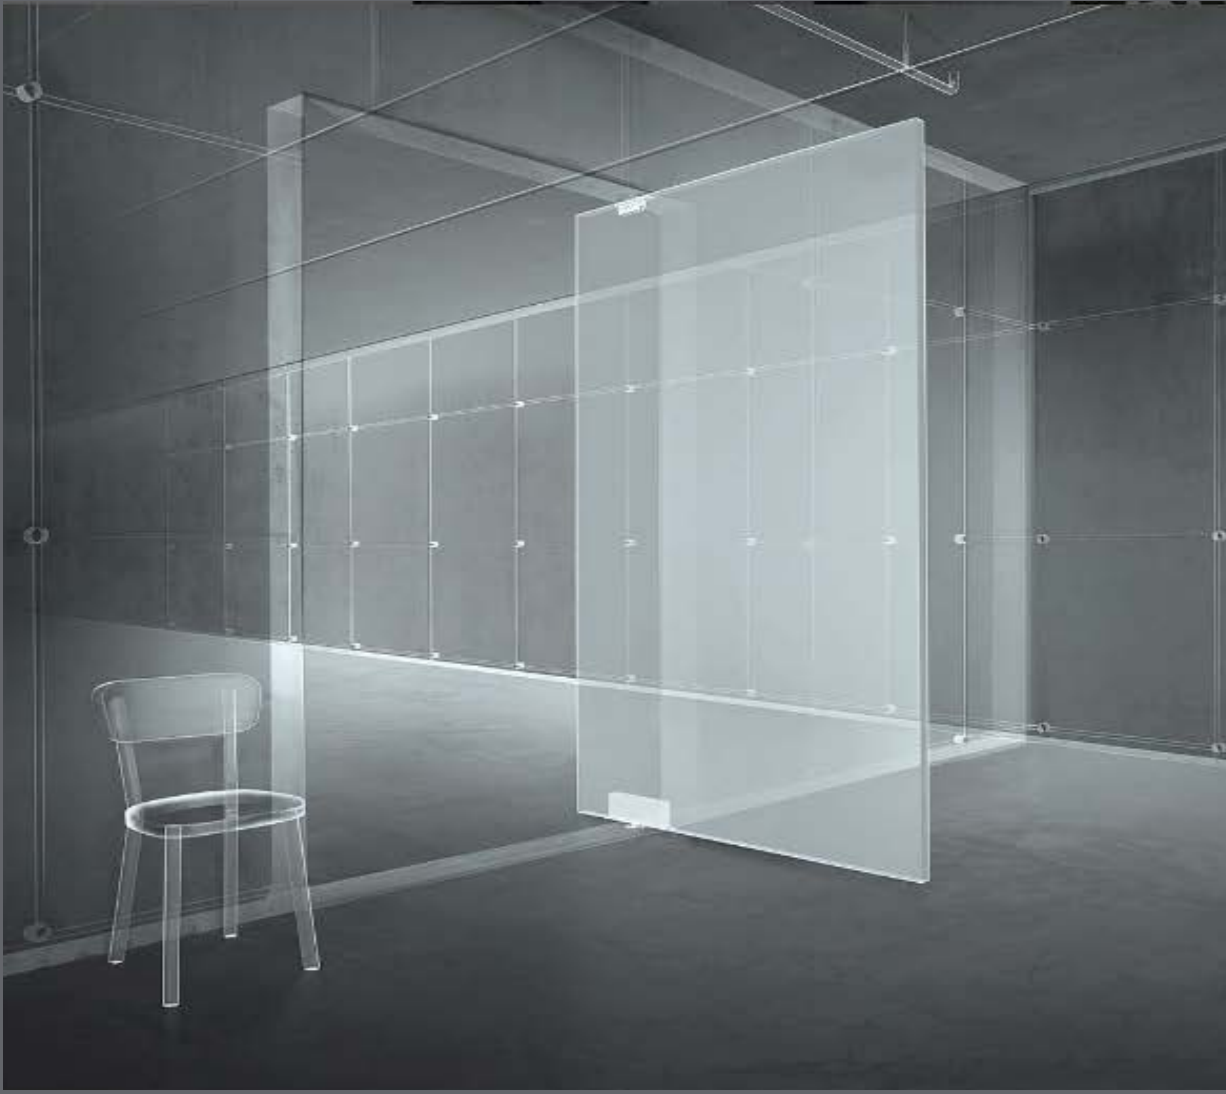

We produce doors that you will inherit from generations

@nilsteeldoor

Pivot doors rotate on the vertical axis thanks to the pivot mechanics located in the lower and upper jambs in the frame of the door. This is not located on the edge of the door as in mechanical hinges, but in an area near the middle. When the door is opened, two separate spaces occur. These spaces are called active spaces and passive spaces. The active space is the larger space where the input-output operation is provided. Passive space, on the other hand, is the smaller space created by the opening of the door, which is not suitable for entry and exit. Pivot doors can move in many directions (inward-outward) as long as possible.

*NIL STEEL DOOR

*Model name :Faran

Pivot doors rotate on the vertical axis thanks to the pivot mechanics located in the lower and upper jambs in the frame of the door. This is not located on the edge of the door as in mechanical hinges, but in an area near the middle. When the door is opened, two separate spaces occur. These spaces are called active spaces and passive spaces. The active space is the larger space where the input-output operation is provided. Passive space, on the other hand, is the smaller space created by the opening of the door, which is not suitable for entry and exit. Pivot doors can move in many directions (inward-outward) as long as possible.

Our existence was born from your desire for quality.

Model name : ENCULUS

One of the superior experiences of the pivot door is undoubtedly the silence of opening and closing compared to other doors. Although this feature differs according to the production, you will notice if a system that prevents the door from being opened from both sides is not installed. You can now say no to the noise that occurs in other doors due to the impact of the collision. You will be able to use your door more quietly with a more elegant, more delicate opening and closing experience.

Model name : ROJ

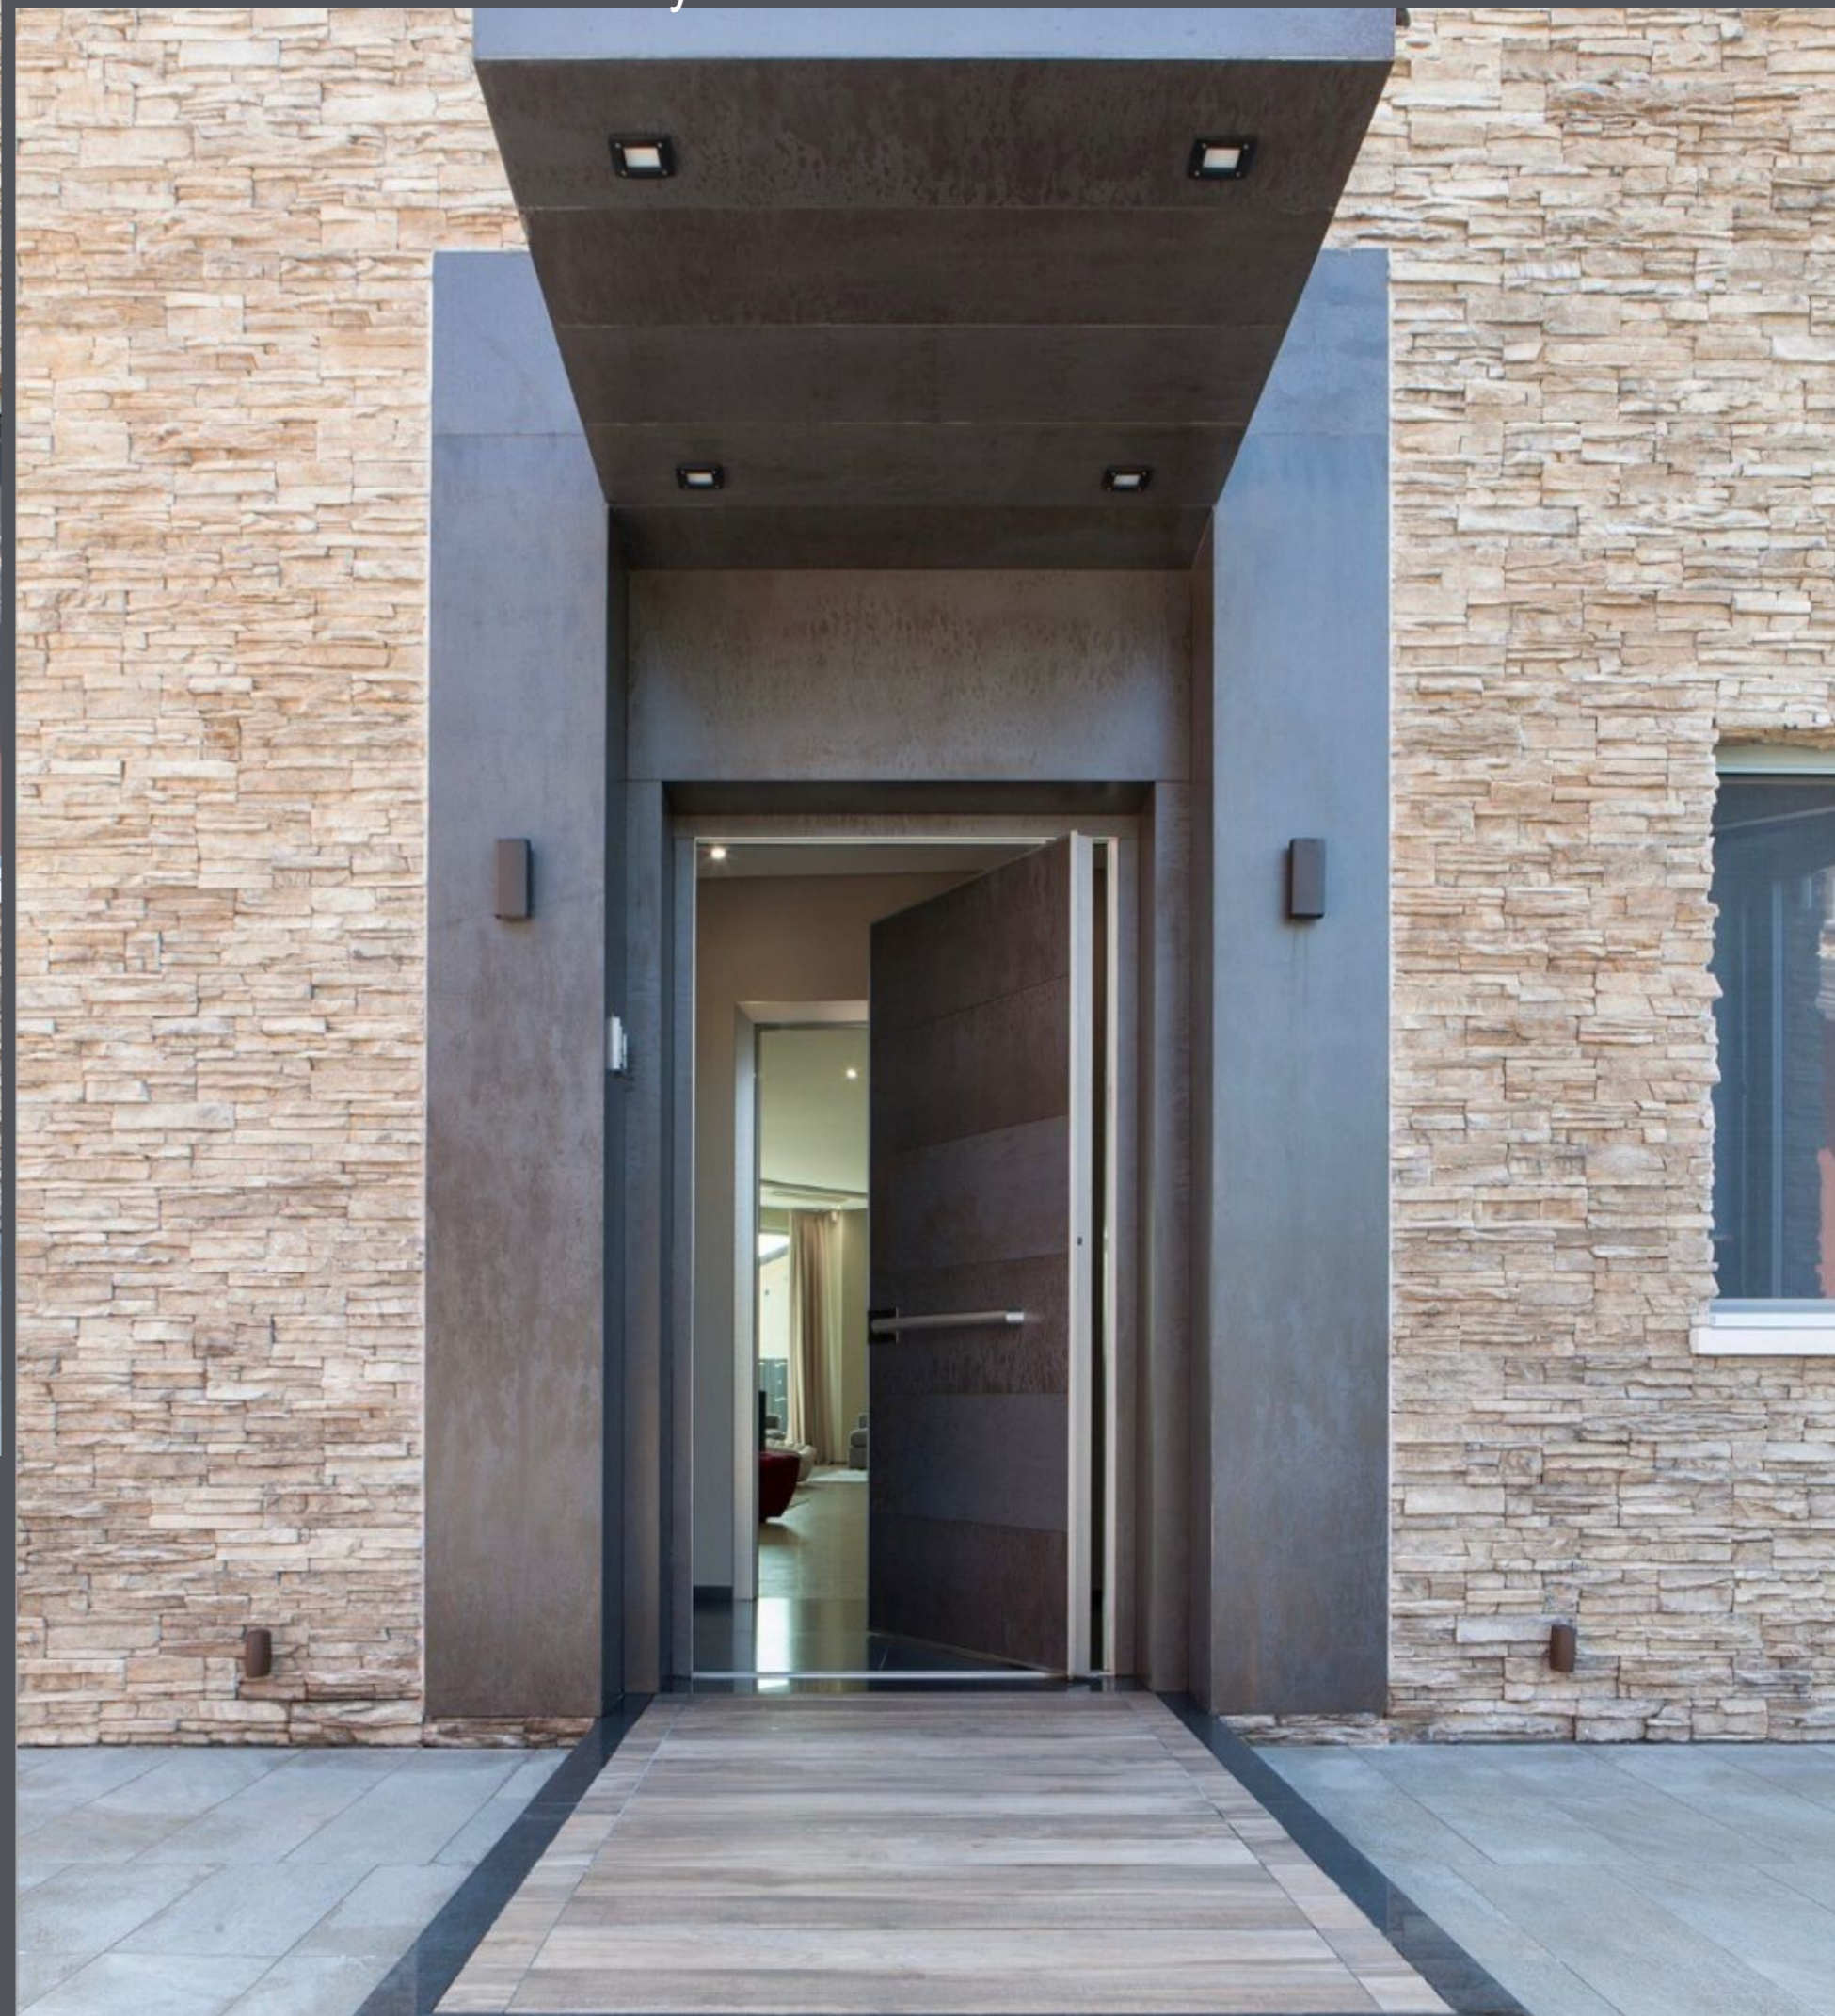

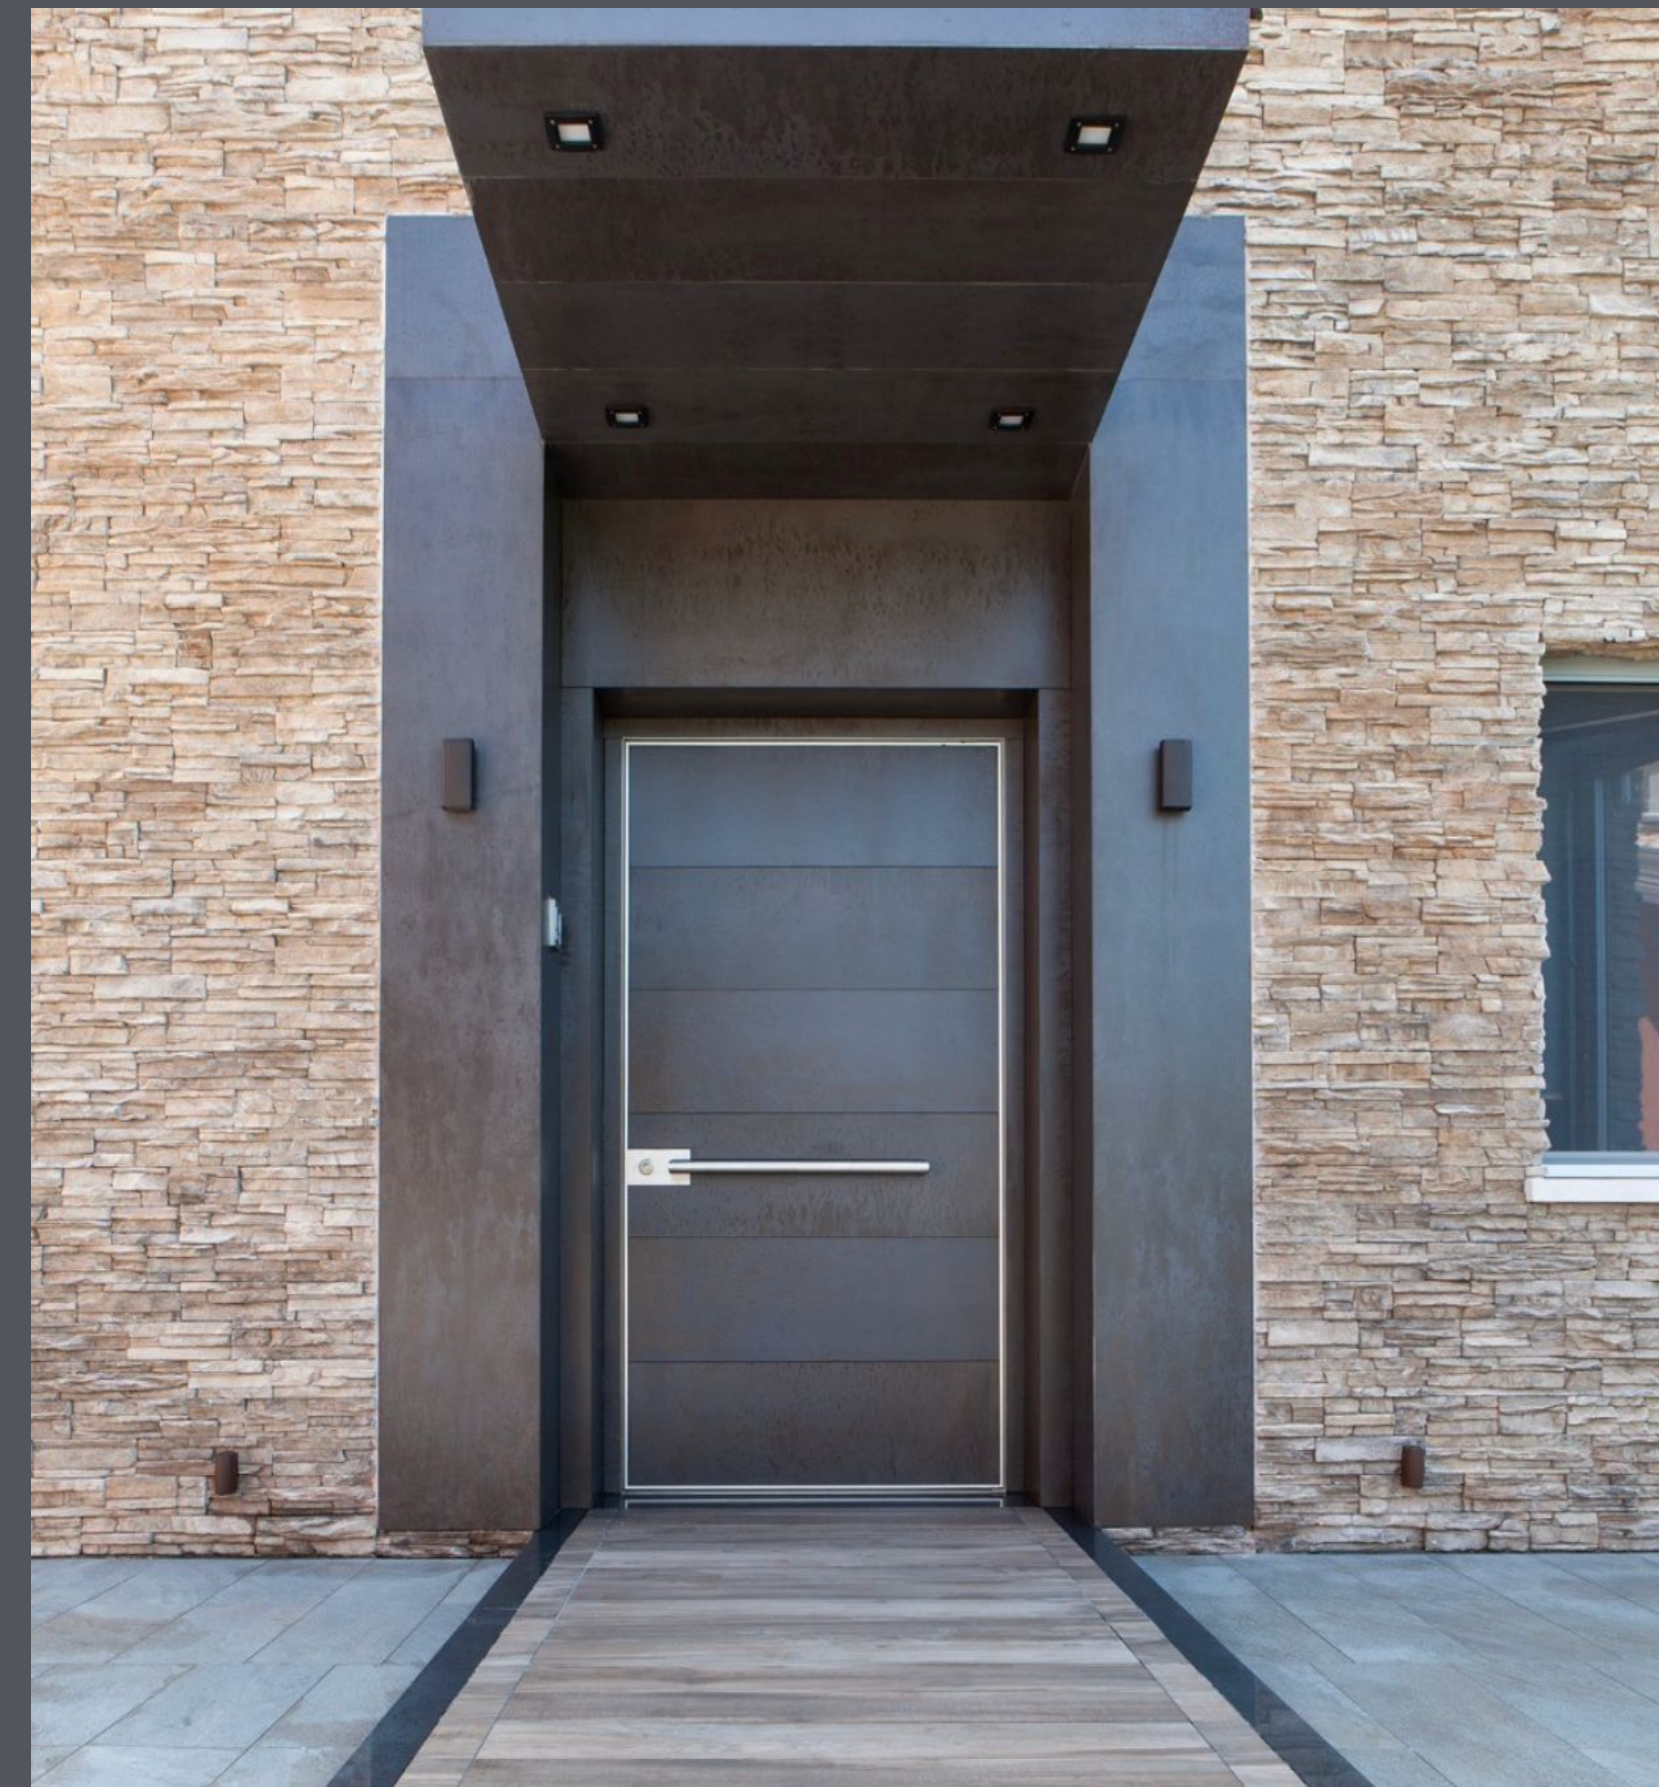

The outer surface of the door is Onyx marble, the inner surface is Italian ceramic.
Thanks to the LED light inside the door leaf, the patterns of Onyx marble become evident when the door is opened.

A magnificent door will never be forgotten
